## INFORMATION REPORT INFORMATION REPORT

7

25X1

Sanitized Copy Approved for Release 2010/06/21 : CIA-RDP80T00246A045000510001-5

Fellowing is a list of the basic equipment and instruments used for structural tests in the Mechanical Laboratory of the Leningrad Institute construction of Civil Engineering. 3

CONFIDENTIAL -NOFORN

No. Name

X

Technical characteristics and purpose

#### MACHINES

1. Universal testing machine for 50 ton with the pulsator for 25 ton. Type FM-1

Tensile, compression and bent tests under the static lead up to 50 ton and the pulsating load up to 25 ton with the frequency up to 600 c.p.m. Error in the readings of dynamometer + 1%

The plant "3 M" Armavir

Eugineering

2. Universal testing machine for 50 ton. Type >4 H-50

Tensile, compression and bent tests under the static load up to 50 ton

The Kharkov Polytechnical Institute

3. Machine for fatigue testing of metals by bending. Type "H4"

Fatigue testing of round sample by bending combined with shear

The Ministry of Machines and Instrument Industry

4. Gagarin's press for the leading up to 5 ton

Compression - Tension tests (with reverser) of small samples (3 - 6 mm) with diagram plotting

5. X-ray unit of UNPI -10 type

I-ray examination of materials to find defects

Ministry of Kleetrical Industry,

Machine for tensile Tensile strength tests of various The Ministry of strength tests for materials with the high deformation Chemical Industry. 250 kg load. Type PM ability USSR, the plant 250 "Metallist," Leningrad 7. Machine for tensile Tensile strength tests of The plant \*3 M\* strengths for 5 ton. materials Armavir Type P-5 INSTRUMENTS 1. Oscillograph M / 0-2 Recording of dynamic processes of "Vibrator" the frequency up to 5000 c.p.s. with with eight loops simultaneous recording of 8 proce sae s 2. Enlarger / -10 for Five times enlargement of the oscil-"Vibrator" the oscillograph lograms of the oscillograph M 0-2 M 0-2 3. Device for measuring Measurements of static elasticity The plant: "Krasny plasticity. Type with resistance pick-ups, sensiti-Isobretatal." UD-2 vity 10-5 4. Three channel tenso-Investigation of dynamic processes Electrotechnical metric unit with the help of resistance pick-Institute, Leninups. Frequency of the oscillations grad recorded up to 1000 c.p.s. 5. Eight channel tenso-The same with the frequency recorded Same as above metric unit 8 AH4-7/7 up to 1000 c.p.s. 6. Ball hardness gauge Brinell hardness test. Tolerable The plant "Krasmolit" Krasmodar error + 1% 7. Aistov's calibrating The Leningred Calibration of tengeneters. Premachine. cision ± 0.1 " Type Institute of Civil 4X / 1 1-5 Engineering 8. Dushockkiv's compara-Field deformation tests. Precision Some as above tor. Type KD-2 ± 10 M 9. Aistov's tensometer. Deformation measurements under Same as above Type T-A-2 laboratory and field conditions. Precision + 1/ Measurements of longitudinal and Some as above shearmeter, Type TGA shear deformation. Precision + 1/4 11. Aistov's device for e as above

10. Aistov's tenso-

measurement of linear deformation of the samples made of raw concrete during their solidification.

Precision 1 /4

12. Aisov's clinometer. Type KA-4

Measurement of incline level of structures. Precision ± 0.02 -0.04

Same as above

13. Aistov's deflectometer. Type / -A-3

43

Measurement of displacement of separate points of structures. Precision + 0.02 - 0.04 mm

Seme as above

CONFIDENTIAL

		140 (2012)	
14.	Polarisation pro- jector. Type ∩⊓ 0-4	Optical investigation of stress	Leningrad State University
15.	Vibroscope "RK"	Investigation and elimination of wibration	Leningrad Tool Plant
16.	Ultrasonic defect detector. Type B4-8P	Investigation of defects in sheet material	
17.	Horisontal optical indicator H K C	Measurement of linear strength. Precision $\pm$ 0.0002 mm	<b>OM</b> 3
18.	Vertical optical indicator HB r with the head KHK	Measurement of linear strength. Precision ± 0.0002 mm	<b>0</b> M3
19.	High precision level	High precision levelling	OM3

Attacl Sanitized Copy Approved for Release 2010/06/21: CIA-RDP80T00246A045000510001-5

Following is a list of equipment of the Laboratory of Continuous Tests of the Leningrad Institute of Civil Engineering.

1. Machine for tensile strength tests with the capacity five tons of "P-5" type of screw action with hand and electric drive, for standard testing of weeden samples. Range of measurement 200-5000 kg. The machine has four side scales with the ranges: from 200 to 500 kg.

from 200 to 1000 kg. from 250 to 2500 kg. from 500 to 5000 kg.

The maximum distance between the clamps is 750 mm. The machine is made by the Armavir testing equipment plant.

- 2. Installation for bent testing with long time leading of 10 standard wooden samples. The leading is applied to the sample at the two points through the levers with the ratio 1: 7. The installation is made according to the drawings by the Central Research Institute of Structures, Moscow.
- 3. Universal installation for continuous tensils, compression and bent testing of eight standard wooden samples. The load is applied to the samples through the levers with 20 fold ratio (1::20). The installation is made by the Institute of Construction Mecanisms, Kiev.
- 4. Installations for continuous tensils and compression testing of one standard sample. Loading is applied to the sample through the levers with 20-fold ratio (1:20). The installation is made by the Experimental Plant of the Central Research Institute of Mechanical Treatment of Timber, Moscow.
